EDUCATION

• University of Michigan, Ann Arbor

Bachelor of Science in Computer Science

August 2023 - Expected May 2027

GPA: 3.6/4.0 | *University Honors Award*

EXPERIENCE

• Lazio Partners (AI go-to-market automation startup)

AI Software Engineer Intern

June 2026 - September 2026

Ann Arbor, MI

- Built AI lead-generation pipelines (**Python**, **FastAPI**, **Prefect**, **ArangoDB**) over a live graph of **~20,000** companies and **150,000** contacts, shipped as a portal feature turning a directory URL into a qualified leads spreadsheet with automated QA
- Found and fixed a bug in a production data-quality filter that was silently deleting real sales leads; rebuilt it to key on each contact's **LinkedIn headline**, cutting wrongful deletions from **~7%** to **~0.1%** of records (internal audit)
- Instituted the team's CI/CD release-governance: originated auto-deploy-on-merge for the backend, and built blocking test-coverage contracts and worktree/PR review discipline that catch regressions before merge

• Whomlab

Full-Stack Software Engineer Intern

January 2026 - May 2026

Prague, Czech Republic

- Built a voice-driven survey platform with a real-time conversational AI agent; projected to serve **7,500+** users across five EU-financed programs
- Engineered a **LiveKit** WebRTC voice pipeline: server-minted JWT room tokens (FastAPI), browser mic → LiveKit Cloud SFU → Python **livekit-agents** worker (**Whisper** STT → **Venice AI** LLM → OpenAI TTS) for real-time spoken responses
- Shipped a **Vue 3** + **TypeScript** frontend (custom **useLiveKit** composable, **MediaRecorder** capture, data-channel dispatch, **Pinia** state) backed by **FastAPI** + **Firestore**, and Cloud Storage

• Charlemagne Labs

AI & Security Engineering Intern

August 2025 - December 2025

Ann Arbor, MI

- Fine-tuned **Gemma 3** (270M) with **LoRA** adapters for phishing URL classification, then merged weights with a custom classifier head for dependency-free inference in a **FastAPI** serving layer
- Built a multi-backend evaluation harness (Hugging Face, **Ollama**, LiteLLM for GPT/Gemini) to benchmark accuracy, precision/recall, and latency of small LMs across realistic phishing and social-engineering scenarios
- Engineered URL, DOM, and headless-browser feature extractors (domain signals, password-field and urgency-language detection, image hashing for look-alike sites) to feed the classifier

• SupermaxCloud

Cybersecurity & Infrastructure Engineering Intern

May 2025 - August 2025

Chicago, IL

- Automated vulnerability scanning (**Nmap**, **Shodan**) across internal and internet-facing systems in a multi-tenant production environment
- Built and maintained **Wazuh**, **Zabbix**, and Uptime Kuma monitoring dashboards and health checks, improving threat detection and service-uptime visibility

PROJECTS

• ProxiPrompt | Fetch.ai Track Winner, MHacks 2026

TypeScript, Python, SpacetimeDB, React

- Turns a crowd into an API: ask about any place (via the Google Maps Places API) and the app reuses fresh reports or pings the few users physically there, then turns their replies into an agentic answer with a confidence level
- Built a **Fetch.ai** uAgent on **Agentverse** that uses **ASI:One** to plan and synthesize answers, with **SpacetimeDB** enforcing state, privacy, and rate limits behind a **TypeScript** orchestrator and **React** PWA; 500+ automated tests

• Whaleden: Agentic Data Pipeline with LLM Enrichment for Comic-Artist Discovery

Python, Postgres, Ollama, Streamlit

- Built an end-to-end pipeline that scrapes **Bluesky** (AT Protocol), **Reddit**, and **Dribbble** for 1,400+ comic artists, with polite throttling, cursor pagination, and idempotent upserts into a relational Postgres schema
- Designed a four-stage **Ollama** (Llama 3.1 8B) enrichment layer (name canonicalization, intent classification, contact extraction, deduplication) with schema-constrained JSON prompting and a **Streamlit** review UI

TECHNICAL SKILLS & ADDITIONAL

• Languages: Python, TypeScript, JavaScript, C++, SQL

• AI & ML: LoRA (Low-Rank Adaptation) fine-tuning, LLM evaluation & LLM-as-judge, multi-critic generation, multi-agent orchestration, structured JSON outputs, Whisper, Ollama, Hugging Face, LiveKit

• Web & Backend: FastAPI, Flask, Node.js, React, Vue 3, Vite, Tailwind CSS, REST APIs, OAuth, JWT auth

• Data & Infra: ArangoDB, PostgreSQL, Prefect, Firebase, Docker, GitHub Actions (CI/CD), Google Cloud Run, GCS, Linux, Git

• Certifications & Activities: Google Cybersecurity Certificate · MSAAVE · Michigan Climbing Club · Mixed Martial Arts · Tennis
